Work Experience:

Frontend Developer | Beeline Russia | February 2022 — May 2023
• The main task is to refine internal products and introduce new functionality into legacy projects of the company.
• Development of a universal table that includes the necessary functionality for implementation in company projects. The main function of the table is to quickly work with 10,000+ data.
• Populated the team's component library to accelerate the implementation of solutions in internal products.
• Made decisions in the technical review of the project before the project entered the implementation stage.
• Conducted daily code reviews to improve the quality of the team's code.

Middle Frontend Developer | Kokoc.tech | August 2021 — February 2022
• Removed bugs of a large project with a legacy code base.
• Working on a large SSR project and development together with the team.
• Correcting templates for new SSR and SPA projects (components and fees).
• Introduced into projects Storybook to document components.
• Discuss with the team the best ways to implement current projects.

Junior Frontend Developer | Studiya Olega Chulakova | June 2020 — August 2021
• Refinement of the functionality of a large project for a well-known bank. SPA project, vue.js.
• Fixing bugs that occurred during the development of the main site Chulackov company. Project SSR.
• Created one-page sites for other companies, with SEO semantics, discussing emerging issues with the project manager. Used Pug and SCSS in projects.
• Together with the team, we developed a multi-page site using three.js and canvas for complex animations. SSR project.
• Participated in correcting templates for new SSR and SPA projects (components and configurations).
• Introduced into projects Storybook to document components.
